## The Newest in Microneedling RF

This newest treatment combines monopolar radiofrequency (RF) and Artificial Intelligence for heating and coagulation of deep tissues.

What is the BTL Exion treatment?

EXION procedure uses a revolutionary combination of two modalities, radiofrequency and targeted ultrasound. Thanks to that it is the first patented technology which not only promotes collagen and elastin synthesis, but also stimulates the natural production of hyaluronic acid.

Subdermal Remodeling  
Without Needles

Extended mode delivers the RF energy beyond the needle tip for additional penetration without physical puncturing of the tissue. This helps to reach deeper layers while reducing discomfort.

EmTone is a non-invasive, FDA-approved procedure that uses radio frequency and sound waves to tighten and tone skin, remove cellulite, and improve skin laxity, without any incisions, scars, or recovery time.

Experience firm skin, thick hair and strong nails with PEARL Marine Collagen. Our formula is Dermatologist developed, Australian made, MSC Sustainably sourced and hydrolysed down to the lowest molecule weight for maximum absorption (clinically proven achieve over 90% absorption - so your body can actually use it) and stimulate fresh collagen production. Developed to seamlessly integrate into your everyday beauty routine to improve skin elasticity and firmness, reduce fine lines, strengthen nails and support new hair growth. Flavoured with only 100% organic coconut flesh (not 'natural' or artificial flavouring) to add a delicious coconut creaminess to coffee, tea, smoothies, oatmeal or yogurt.
